(Senior) Project Manager

The role of the (Senior) Project Manager is to support and ensure execution of Product Development stage projects with exceptional quality, speed, and efficiency. The (Senior) Project Manager will work closely with Product Development functions, as well achieving fluid cross-functional alignment across Product Management, Regulatory, Discovery, Bioprocess Development & Manufacturing, and Business Development.

Key Outcomes:

- Develop and manage projects related to the execution of greenhouse and field-trial efforts across technology bases and geographic boundaries.
- Runs efficient but comprehensive project development, tracking, and close-out processes within goal scope set by Indigo.
- Facilitates effective communication across organization, from Discovery to Commercial teams, and from junior researchers to senior management.
- Participate in building Indigo's organizational capability of project management.

Competencies

- At a minimum, B.S. in a scientific or engineering field with 5+ years of industrial experience and 2+ years in a project management capacity.
- Ideally, Ph.D. and/or M.B.A. with 8+ years of experience in agricultural industry with 4+ years in a project management or leadership capacity.
- Excellent listening and communication skills.
- Builds and maintains good relationships.
- An ability to lead and energize a group towards an aggressive goal.
- Passion for Indigo and our core values.
- High energy but calm.
- A great planner with exceptional organization skills.
- Focuses on goal achievement and loves getting things done.
- Scientifically astute with strong technical background.
- Project management skill and experience but not wedded to traditional approaches.
- Communicate both positive and negative issues in an open, direct, and straight-forward manner.
