

Growing Data For Impact

Company Overview

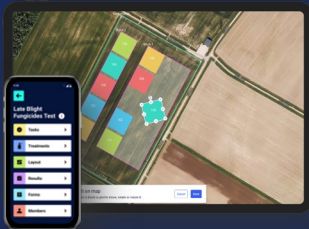

Our Solutions

Translating data from field trials into crop nutrition plans and sustainable agriculture actions at field level

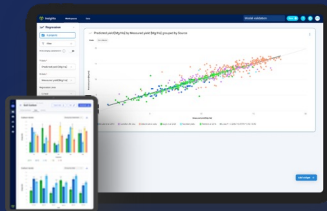

Agronomic Trial Management

Accelerate product development from trial operations to data collection

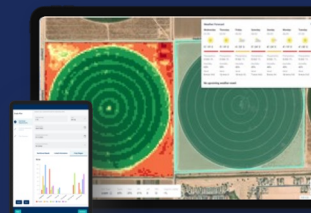

Insights & Models

Analyze big data for deeper insights and model visualizations

Digital Crop Advisor

Leverage big data insights for trusted field-level decision support

Sustainability Center

Industry-accepted scientifically based framework that defines sustainability at field-level

RegenIQ
Powered by Agmatix

Agronomic Trial Management

Plan, orchestrate and analyze your agronomic trials in a standardized and intuitive way

Supported Trials:

- Small Plot Trials
- Pilot Programs
- On-Farm Trials
- Side-by-Side
- Large-Scale Commercial Trials

End-to-End Trial Solution

- Cloud-based solution that is scalable, secure, and can be configured with ease.
- Comprehensive dashboard for trial planning from layout, execution, budgeting, and data analysis.
- Analyze trial data as the key driver for innovation in your organization.

Data Collection & Validation

- Customizable protocols and forms, offline mobile data collection, and shareable field tasks.
- Visibility and control of your research trials status, budget, and staff workload.
- GLP trial support with audit trail capabilities for traceability and validation.

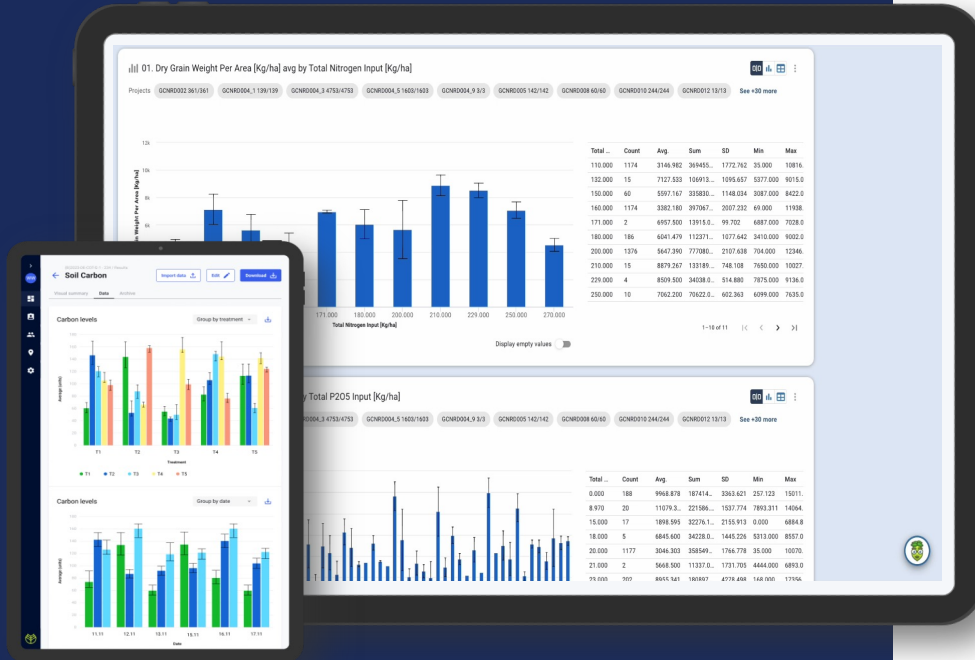

Collaboration & Reporting

- Automated protocol governance for better collaboration, reporting and analysis.
- Real-time trial summary and data analysis capabilities for regulatory, sales, and marketing purposes.

Insights & Models

Empower your business with actionable analytics to make better decisions that drive product development, sales and marketing

Analytical Capabilities

- Automate data fusion and standardization regardless of source origin or format.
- Ask and find answers using Gen AI and natural language queries into product performance and efficacy results.
- Encourage data exploration through user-friendly descriptive analytics and advanced statistics, utilizing pre-built widgets.
- Transform raw data into interactive visualizations to make it easier to spot patterns, interpret trends and demonstrate efficacy.

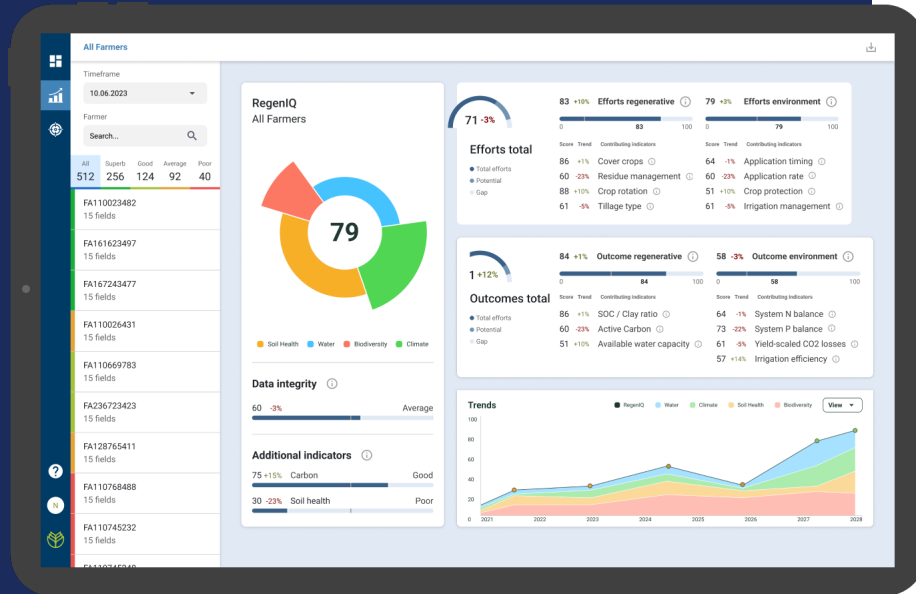

Competitive Advantages

- Digital twin field-testing capabilities: mix of simulated and actual field testing.
- Generate prediction models and other discoveries.
- Empower business users with precise data for informed decision-making, fueling sales and marketing with proof points that demonstrate product efficacy.

Sustainability Center

Monitor regenerative ag practices and assess their influence on sustainability using our adaptable framework  **RegenIQ**
Powered by Agmatix

Impact Supply Chain Performance

- Focus on both efforts and outcomes.
- Integrate on field measurement and remote sensing.
- Scalable for smallholder farms and commercial farms alike.

Optimize Regenerative Practices

- Track progress against goals and enable modeling of practices.
- Recommend actions for improvement based on ROI/E.
- Work with growers, supply sheds and suppliers to enable action.

Power Insights And Reporting

- Provide insights to mitigate risk.
- Work in combination with carbon MRV platforms.
- Integrate with reporting systems.

With Agmatix

In summary, the path forward continues where it all began – agronomic big data

Boost research
with powerful
data

Speed time to
trial insights

Ready Sales &
Marketing with
visual proof-
points

Drive collaboration
inside and outside
your organization

Discover new
innovations from
existing data

Enable data-
driven decisions

THANK YOU
